

Name: Engbino, Kaye P.

Section: E1

Assignment #1

1. Differentiate technical writing from Non-Technical Writing.
 - Both technical and non-technical writing provides information but has a different approach to giving such. Non-technical writing gives you a more general knowledge of a topic. Technical writing then makes its way, a more concise and bias-free kind of writing that gives you verifiable hard facts.
2. Explain the subject of Technical Writing: Tangible and Abstract
 - Technical writing's subject can be either tangible or abstract. Tangible is something that can be seen or touched. Like how to fix a bug of a program or how to assemble a device. While abstract being the opposite of tangible is something that is not related to tangible objects.
