

## **MEMORANDUM**

DATE: October 12, 2020  
TO: Riot Games  
FROM: Kaye P. Engbin, Beta Tester  
SUBJECT: Launch of League of Legends: Wild Rift

This is to inform all of the staff regarding the opening theme of the game. It has come to my notice that hangs are experienced specifically on Ahri and Yasou's part and I have also seen other testers complaining about it, so, I decided to inform you to strengthen the games' graphics and gameplay.

Additionally, there is no star system. This is a very important thing, especially in the rank. The game originated from PC and it is best to use the star system or the LP because that is what people got used to. Turrets are also too soft on the recent patch which makes the game finished a lot earlier than expected. In the role queue area, a lot of players steal roles and it is best if roles are added to avoid stealing roles. Moreover, a slight change of the fogs in the game and for the war of items would be great.

The players are expecting the actual launch of the game where fewer errors will be experienced. We are aware that the game is still on the beta test, however, in the actual launch players will give importance to these kinds of graphics error.
